Wide Range Achievement Test Joseph Florian Jastak,Sarah Jastak,Sidney William Bijou,1965 Achievement-Battery. Spelling. Reading. Arithmetic.

Understanding Psychological Assessment William I. Dorfman,Michel Hersen,2013-11-11 Introductory texts on psychological testing and evaluation historically are not in short supply. Typically, however, such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests. More practical, clinically relevant presentations of psychological instruments have been confined to

individual volumes with advanced and often very technical information geared to the more sophisticated user. Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material, at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test. Understanding Psychological Assessment is an attempt to address these concerns. It brings together into a single volume a broad sampling of the most respected instruments in the psychologist's armamentarium along with promising new tests of cognitive, vocational, and personality functioning. Additionally, it presents the most updated versions of these tests, all in a practical, clearly written format that covers the development, psychometrics, administrative considerations, and interpretive hypotheses for each instrument. Clinical case studies allow the reader to apply the interpretive guidelines to real clinical data, thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test. Understanding Psychological Assessment includes cognitive and personality tests for adults, children, and adolescents, as well as chapters on the theory of psychological measurement and integrated report writing.

Examining the Concurrent Validity of the Wide Range Achievement Test 4th Edition and the Wechsler Abbreviated Scale of Intelligence Richard Louis Sylvester, 2008 The current research investigated the relationship between the WRAT-4 and WASI in males over 40. 61 participants, predominantly Caucasian, ages 42 to 90 ($M = 63.33$, $SD = 12.56$), participated. It was hypothesized that there would be strong positive correlations between the WRAT-4 and WASI and depressed individuals would perform more poorly on both measures. A 2 (order of administration) x 2 (type of test) mixed ANCOVA used depression (as measured by the Beck Depression Inventory 2nd Edition) as a covariate and showed participants who completed the WASI first did not perform as well as participants who completed the WRAT-4 first. A 3 (test score) x 2 (depression level) mixed ANOVA was also utilized. Both hypotheses were confirmed.
